Subject: Shipment of vertical markers for Surround View Camera calibration

We wish to inform you that future **Ferrari** models will be equipped with a parking assistance system called the "Surround View Camera" that allows a 360-degree view of the area around the car.

The system described above requires a precise re-calibration every time the initial setting undergoes an alteration. The references necessary for the calibration can only be reconstructed through a system of panels developed for the characteristics of the model in question. For this reason specific equipment, developed and tested by **Ferrari**, is necessary to help ensure the correct functionality of the system.

The operating details for the calibration will be provided in the workshop manual and during classroom training.

The composition of the equipment is indicated below:

Ferrari code	Description	Image	Quantity to be ordered
70006097	Vertical Marker calibration kit (The kit consists of 4 panels).		1

Ferrari North America

The Kit part number **70006097** is composed of 4 panels with frame:

- Metal tubular frame painted with opaque epoxy powders;
- 4 Rear support structures in 20/10 mm sheet metal, laser cut, painted with opaque epoxy powders and hinges with locking system;
- Double front and rear support system;
- Screw adjustable rubber feet;
- Opaque white Forex panels;
- Level for adjustment;
- Rigid case for 4 panels with wheels to facilitate movement.

- IMPORTANT -

The Kit described above will become a (mandatory) qualitative standard of the Ferrari Authorized Network's after-sales assistance service process and will be included in the minimum list of specific workshop equipment necessary for repairs. All Authorized Ferrari Dealers will have this new equipment direct shipped.

The complete kit will be automatically shipped to your dealership.

Thank you for your co-operation.
