

Subject 2020 Corolla CBU Battery Discharge Issue		Market USA
Service Category Power Source/Network	Section Battery/Charging	
Applicability 2020 Corolla CBU (GAS ONLY)		

APPLICABLE VEHICLES

2020

Corolla

CONDITION

Some 2020 model year Japan built Corolla vehicles may exhibit a condition where the battery may become depleted during shipping.

It has been discovered that when the D/C cut fuse is not installed voltage may continue to flow to an ECU while the vehicle is powered off causing a parasitic draw depleting battery state of charge.

RECOMMENDATIONS

Ensure all 2020 model year Japan built Corolla vehicles have the D/C cut fuse properly installed. Proper D/C cut fuse installation location can be found on the PDS check sheet.

If a vehicle is found without the D/C cut fuse installed confirm the battery SOC by following PDS document

Please note that as of March 5, 2019 the manufacturing plant and North American Port of Entry locations are installing the D/C cut fuse.
