

ANC Booms/Rumbles in Cold Weather

AFFECTED VEHICLES

Year	Model	Trim
2018-19	Accord	ALL

Do you hear a booming or rumbling through the speakers when the cabin temperature is **55°F** or lower? Does it go away once the cabin heats up? We're aware of this issue and have it under investigation.

If you get a vehicle in for this, remove the covers in the headliner for the ANC microphones and check if the insulating foam is damaged or folded over as shown below. We've found this may be the reason for the noise.

Replace the damaged foam and confirm the repair. If the repair is successful, provide feedback to Techline.
