

1. Inverter serial # and 6 digits of chassis Vin #. The inverter serial # is located in the passenger ottoman seat. There are 2 vents on the face frame (one by the aisle and the second is behind the wall). You need to access the one behind that is facing the power sofa and pry out the inner circle vent. Use a flash light and you can see the serial number on the bottom part of the inverter.

2. Enumerate and run the inverter with different modes of power. Examples below:

a. Microwave running on shore power. Light stayed on green at inverter control panel and microwave worked fine. Answer here. **Light stays green, microwave completes 1 minute cycle.**

b. Microwave running on battery power. Light stayed on orange at inverter control panel and microwave worked fine. Answer here. **Light stays solid orange, Microwave completes full 1 minute cycle.**

c. Microwave running on generator power. Light stayed on green and when tried using microwave, it went to orange and stayed in orange. If there is an error code, please mention it. Answer here. **Light changes to Flashing orange when microwave started, Microwave shuts off at 45 seconds. No error code displayed, light returns to green on 10 seconds and microwave comes back on.**

d. Inverter controller went to E03 code without using anything. ONLY if there is an error code showing. Answer here. **No codes**
