General Information

D&D Instruments (DDI), an independent instrumentation cluster specialist located in Minneapolis, Minnesota, offers an odometer setting service to Freightliner, Western Star, FCCC, and Thomas Built Bus certified dealers.

This service is currently available on the following cluster models: **ICU3, ICU3X, ICU3S, ICU4, ICU4Me.**

The current process used to document mileage when replacing the instrumentation cluster (a sticker in the door jamb with the correct odometer reading at the time of replacement), is deemed fully compliant with the law. However, customers may want to have the ICU programmed with the correct odometer reading for other reasons, such as maintenance tracking or driver logs. Follow the below procedure to place the odometer programming request.

ICU odometer programming request

1. Open DDI website by using the link: <https://ddinstruments.com/odometer-program>.

See **Fig. 1** for service request form.

2. Update the following information:
 - Year, make and model of the vehicle
 - Mileage to be programmed
 - Vehicle Identification Number (VIN)
 - Instrument cluster part number
 - Dealer contact information (party certifying the information provided as being accurate)
 - Upload the proof of mileage (e.g. engine controller image or repair order)
3. Submit the form.

After providing this information and agreeing to DDI terms of service for odometer programming, the dealer can ship DDI a new instrument cluster for programming. Upon receipt of the cluster, DDI will program the odometer and return ship it on the same day the cluster is received.

DDI will label the instrument clusters with the VIN provided to ensure the unit is installed into the correct vehicle.

For more information about D&D Instruments visit: <https://ddinstruments.com/medium-heavy-duty-vehicle-cluster-repair/>.
