2055155/1	5/24/19	72-19-01TT	Original publication.

## Technical Background

The Left Front Memory Seat is inoperable or unable to set basic settings. This may include fault (B135354: Seat angle adjustment motor no basic setting), stored in address word 36 Driver's Side Seat Adjustment. The **-J810-** Driver Seat Adjustment Control Module may have been previously replaced for this concern.

## Service

Verify the operation of the Left Front Seat Motors, including the Lumbar Adjustment, by operating the motors from full stop to stop. Pay particular attention to the operation of the **-V45-** Driver Backrest Adjustment Motor.

If the testing results find that during the stop to stop operation a motor is interrupted and doesn't complete its full range of travel, and when activated again travel continues, suspect a possible issue with that motor or related wiring.

Basic settings of the Left Front Seat may also be completed by running all seat motor positions from stop to stop with no interruptions, followed by a confirmation chime, which indicates that basic settings has completed.
