</tbody>
</table>

BACKGROUND
The shift knob button is susceptible to breakage after being exposed to heat and humidity.

CUSTOMER NOTIFICATION
Owners of affected vehicles will be sent a notification of this campaign.
Do an iN VIN status inquiry to make sure the vehicle is shown as eligible.
Some vehicles affected by this campaign may be in your new or used vehicle inventory. Repair these vehicles before they are sold.

CORRECTIVE ACTION
Replace the shift knob button.

Skill Level: Repair Technician

REPAIR PROCEDURE

1. Use a plastic trim tool to remove the shift knob cover.

**NOTE**
There are four retaining tabs.

2. Remove the two screws from the shift knob.

**SCREWS**
Replace. 2.5 N·m (22.1 lb·in)
3. Remove the shift knob.

4. Make sure the knob set bushing is still on the lever. If it sticks to the shift knob, remove it with a small screwdriver, then install it back into the lever.

5. Using a small flat-head screwdriver, push in the locking tab on the side of the shift knob button, and gently wiggle it away from the knob.

**NOTES**

- Be careful not to lose the spring.
- The tab may break while being removed.
- If the shift knob button is broken, remove it and make sure there is no debris left inside.
- If the shift knob is broken and the spring is gone, install a new spring.
6. Insert the spring into the shift knob button, and slide in the new shift knob button until it clicks into place.

7. Press the shift knob button several times to make sure it works smoothly and returns to its original position.

8. Press the shift knob button half way in, and install the knob onto the shift lever assembly.

9. Install two new flat-head screws, and torque them to 2.5 N·m (22.1 lb-in).

10. Install the shift knob cover.

11. Make sure that the lever works normally and you can select every gear.

END
