

SS1034234 Cascadia ICU4Me - Low Air Warning Light Not Coming On

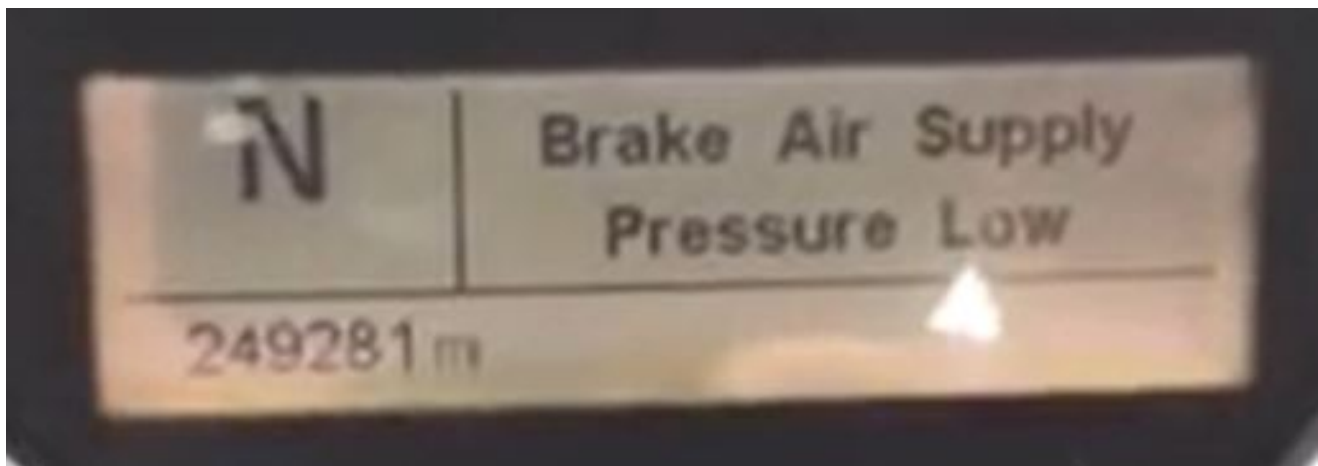

Cascadia ICU4Me - Low Air Warning Light Not Coming On

Applicable Vehicles

Legacy Cascadia, EPA 2016 and newer with ICU4Me instrument cluster

Issue/Concern

When air pressure is low, the ICU displays a pop up message that says "Brake Air Supply Pressure Low" (see below) and an audible alert buzzer sounds.

The concern is the traditional low air warning light in the location shown below does not illuminate under low air conditions or during the key on self test.

Solution

EPA 2016 and newer ICU4Me instrument clusters no longer use the low air warning light. Low air warning is indicated by the "Brake Air Supply Pressure Low" popup message in the ICU display along with the audible alert buzzer. This is intended function and complies with government regulations.
