All	2013-2016	All with TDI	All	All	All

Revision Table			
Instance Number	Published Date	Version Number	Reason For Update
2041118/13	6/12/19	231707	Removal of fuel pre-analysis requirement.
2041118/1	6/24/15	V231501	Original publication.

One or more of the following fault codes may be stored in the ECM Fault Memory:

DTC	Description
P0087	Fuel Rail/System Pressure – Too Low
P0088	Fuel Rail/System Pressure – Too High
P0191	Fuel Rail Pressure Sensor “A” Circuit Range/Performance

Technical Background

Note:

These vehicles are not covered by the Warranty Extension found within the Warranty Policies and Procedure Manual.

Production Solution

Information Only.

Service

Initial Diagnosis of the High Pressure Fuel Pump (HPFP)

Note:

Removing the **-N290-** Fuel Metering Valve to inspect for metallic particles should only be considered as a last step after all GFF diagnostic procedures have been performed. This includes testing supply pressure to the high pressure fuel pump (low pressure side), and checking for internal leakage from the injectors and the **-N276-** Pressure Regulating Valve.

Figure 2. Surrounding Area

Note:

Prior to removing the **-N290-** Fuel Metering Valve, the area surrounding the valve (Figure 2) must be clean and dried with compressed air to remove ALL debris from the area. See Repair Manual Group 20 Fuel Supply, General Information, Clean Working Conditions in Elsa.

If debris enters the fuel system, components may be damaged.

Figure 3. N290 Fuel Metering Valve and Valve Bore

1. Remove the **-N290-** Fuel Metering Valve and inspect the valve and valve bore for the presence of metallic particles (see Figure 3).

2. If metallic particles are found on the **-N290-** Fuel Metering Valve or in the valve bore, replacement of the high pressure fuel pump and major components in the fuel system is necessary. (See High Pressure Fuel Pump Replacement and Fuel System Repair section below).

3. If no metallic particles are found on the **-N290-** Fuel Metering Valve or in the valve bore, do not replace the high pressure fuel pump. Open a VTA case and contact the Volkswagen Technician's Helpline for further assistance diagnosing the vehicle, this bulletin does not apply.

! Note:

To prevent fuel system damage, ensure that the **-N290-** Fuel Metering Valve is free of any contaminants before reinstalling.

Prior to reinstallation of the **-N290-** Fuel Metering Valve, ensure that both O-rings are not damaged. If they are damaged, the high pressure fuel pump must be replaced.

To prevent damaging the O-rings when reinstalling the **-N290-** Fuel Metering Valve, lubricate the O-rings with diesel fuel (**see Figure 4**).

Figure 4. N290 Fuel Metering Valve O-rings

4. Install the **-N290-** Fuel Metering Valve into the valve bore using light pressure.
5. Install and hand tighten both M5 fasteners, ensuring that the threads are clean and dry.

Pre-tighten to 2 Nm, then to 6.5 – 7 Nm.

High Pressure Fuel Pump Replacement and Fuel System Repair

1. Always use the latest information in Elsa for detailed removal and replacement instructions of the components listed in this technical bulletin.
2. Remove in-tank fuel pump (Sending unit).
3. Drain and clean the fuel tank using the suction pump VAS5226.
4. Fill the fuel tank with **(1.3 gallons)** of fresh diesel fuel.
5. Drain and clean the tank completely using VAS5226.
6. Replace the in-tank fuel pump (Sending unit).
7. Flush the fuel lines (both feed and return) from the fuel tank to the bulk head, using either mineral spirits or brake clean with compressed air. Alternate from both ends of the lines while using a shop towel to catch any debris that may still be in the line. Verify all metal is removed from both lines before proceeding.

23-17-07 - Diesel Fuel System Diagnosis and Repair

Release date: 6/12/2019

8. Replace the following components as per Elsa: high pressure fuel pump, high pressure fuel lines, fuel rail (with both sensors included), all fuel injectors, fuel return lines (overflow lines), fuel filter, fuel filter housing, auxiliary fuel pump.

 **Note:**

The rubber fuel line insulators from the original injector supply lines should be transferred to the new lines.

9. Once repairs are complete fuel the vehicle.

10. Ensure the fuel injector return lines are properly seated and sealed once it is installed.

 **Note:**

The “injector quantity calibration” and the “injector voltage calibration” for the new injectors must be programmed into the -**J623**- Engine/Motor Control Module after replacing one or more injectors. Refer to “Guided Functions” in the vehicle diagnostic tester.

11. Using the VAS tester, perform the guided function “Vent Fuel System”. (see Elsa for additional information under “Fuel System, Filling and Bleeding”).

 **Note:**

If the test plan is unavailable through Guided Functions, switch to Self Diagnosis>Engine Electronics>Basic Settings>35 and perform the basic settings 3 times consecutively. For UDS vehicles, perform basic settings for initial fueling.

12. Once the repairs are complete, test drive the vehicle.

13. Inspect for fuel seepage at the fuel injector return line connector. If seepage is found the condition MUST be corrected.

Warranty

Please use appropriate labor operations from ELSA and parts from ETKA based on vehicle type.

To determine if this procedure is covered under Warranty, always refer to the Warranty Policies and Procedures Manual ¹⁾					
Model(s)	Year(s)	Eng. Code(s)	Trans. Code(s)	VIN Range From	VIN Range To
