

SPECIAL SERVICE CAMPAIGN (K0B)

****Owner's Manual Insert****

Certain 2018 -2019 MY Tacoma and Tundra
Millimeter Radar Wave Sensor

Remove at this line and put insert in section 4-5 of the owner's manual.

SPECIAL SERVICE CAMPAIGN K0B – Owner's Manual Insert

During the completion of Special Service Campaign K0B, this vehicle was found to be equipped with the non-Toyota-approved modifications noted below.

Because this vehicle had non-Toyota-approved modifications, PCS and Dynamic Radar Cruise Control (DRCC) **may not operate as designed even after the free remedy is was performed.** For example:

- PCS may activate even if a collision is not likely.
- PCS may not recognize a vehicle or a pedestrian when a preceding vehicle or pedestrian is ahead.

For more information on the effects of non-Toyota-approved modifications on PCS go to www.toyota.com/content/ebrochure/CFA_TSS_Precautions.pdf.

When the dealer performed the campaign remedy, PCS was set to "OFF" and PCS was configured to retain the last setting following a key cycle. **Toyota recommends the PCS and DRCC system NOT be used when non-Toyota-approved modifications are installed on the vehicle.** Constant speed control mode should be used instead of DRCC if cruise control is used. If the vehicle is returned to factory condition, the PCS and DRCC systems can be used.

NOTE: While PCS is deactivated, the PCS warning light will be displayed in the instrument cluster and a message will be displayed on the multi information display. If this light and message are not present, then PCS has been re-activated.

For more information about the PCS system and how to use constant speed control mode refer to section 4-5 of this owner's manual.

The non-Toyota-approved vehicle modification(s) present of the vehicle at the time of K0B repair is(are):
