

**URGENT REMINDER: ProMaster Transmission Bracket Service**

May 29, 2019

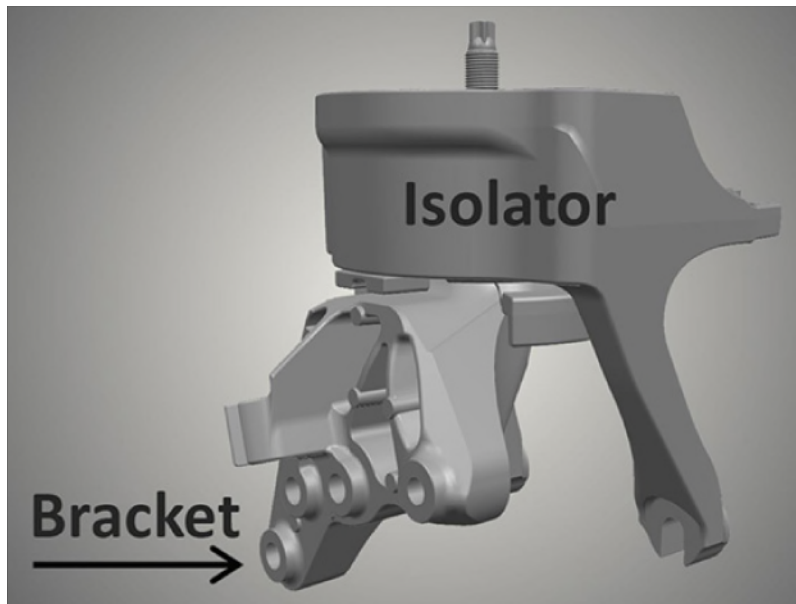

**Please share this information with all personnel servicing ProMasters.**

When servicing a Ram ProMaster equipped with a 3.6L engine, this notice is to emphasize the importance of **replacing** the **one-time use** bolts that fasten the left transmission mount to the transmission.

**WARNING: DO NOT reuse these transmission mount bolts, as it may lead to future catastrophic damages.**

Be sure to check all mounting bracket torque specifications -- some fasteners have a torque value higher than most bolts

*Replace the bracket on any ProMaster with a VIN built before 10/23/2015.*
