<p>CUSTOMER TIP: MOOD LAMP SK3</p>		

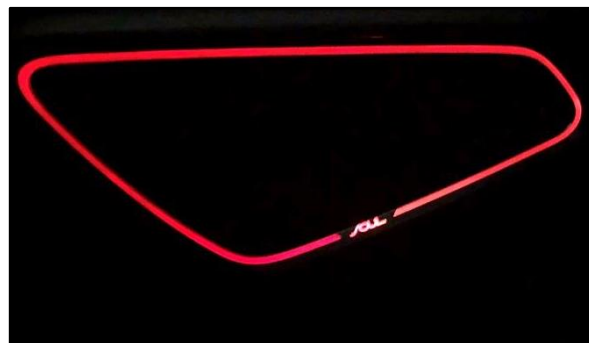

This Pitstop provides information regarding the Sound Mood Lamp logic available only on the 2020MY Soul GT-Line 1.6T (SK3) with the Comfort and Convenience Package.

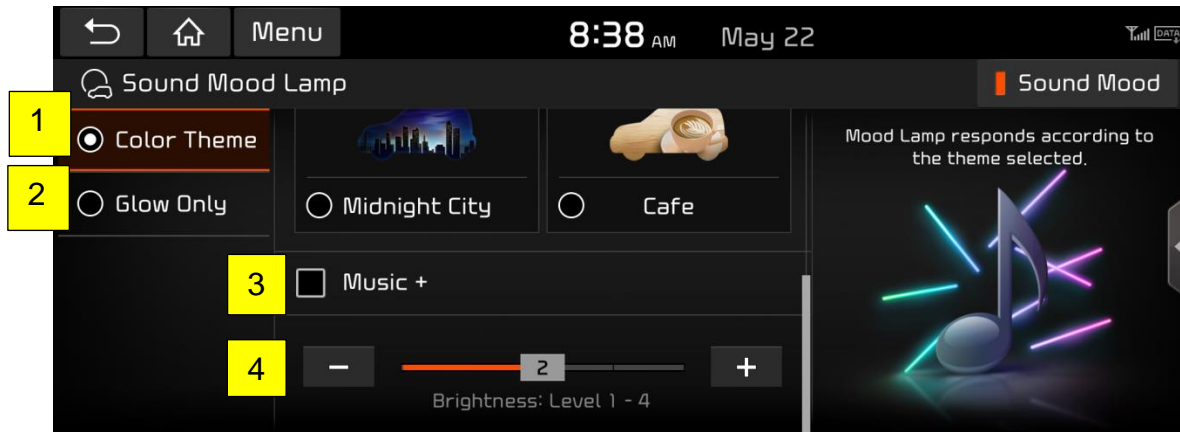

Customer complaints may include:

- We were driving at night and all of our mood lights went out, they would only turn on when we were parked or stopped.
- The mood lights will turn off when driving and will only come back on when at a stop.
- I can't get the mood lights on my vehicle to work.

When active, the mood lamp will illuminate 3 areas: The driver and passenger side front door handles, the driver and passenger side front door speakers, and the front passenger side foot well (not pictured below).

Note: The lights for the passenger side foot well will only illuminate if the lights are set to **"Color Theme"** Mode outlined on page 2.

1) **Color Theme:** This will display a selection of available themes for the customer to choose from. Based on the selected color theme, the lighting on the front door trim (inside handle garnish/armrest molding) and at the passenger foot well will change its colors in various patterns. Available options are:

- Party Time
- Hey! Yo!
- Traveling
- Romance
- Midnight City
- Cafe

2) **Glow Only:** This will display a selection of available colors for the customer to choose from. Based on the selected color, the lighting will provide a continuous soft glow effect from the selected color options below:

- Blue Flight
- Peaceful Forest
- Dreamy Purple
- Violet Cloud
- Orange Delight
- Golden Insight
- Refreshing Sea
- Super Red

3) **Music +:** Selecting this will synchronize the lighting during music playback. **Note:** If Music + is selected, the mood lamp will turn off when there is no music playing, the music is paused or the music is muted.

4) **Brightness:** Allows the customer to adjust the brightness level of the mood lights.

By default: The Sound Mood Lamp is designed to gradually turn off when reaching a predetermined factory set speed approximately 10 MPH. The mood lights will also turn off when a door is open. No repair attempts should be made to correct either of these concerns.

Additional information on operation of the mood light is detailed in the audio manual.
