

DAIMLER TRUCKS NORTH AMERICA AFTERMARKET

No.: 19TL-8
July 1, 2019

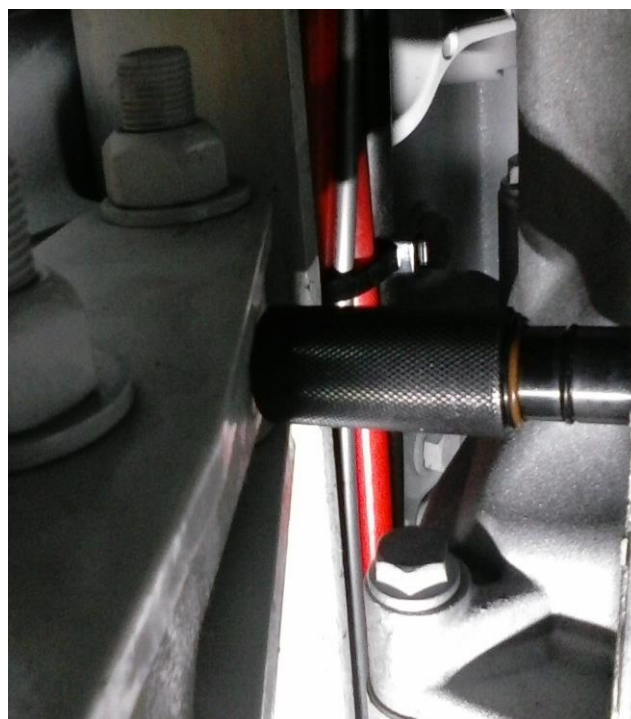

TO: Service Locations

FROM: Service Systems Development

SUBJECT: **Modification to Flywheel TDC Locating Pin Tool – W470589001500**

GENERAL INFORMATION

The crossmember mounting bracket of the “New Cascadia” prevents correct installation of the TDC locating pin tool through the crankshaft position sensor hole in the flywheel housing. There is a modification required to the standard tool for it to clear the crossmember mounting bracket in the “New Cascadia” and fit properly into the bore.

REQUIRED ACTION

Using appropriate equipment, grind the knurled end of the W470589001500 tool to produce a beveled edge. The beveled edge of the flywheel TDC locating pin tool will provide adequate clearance between the crossmember mounting bracket and the flywheel housing.
