

#### 21 Engine difficult to start, turbocharger is damaged V8 4.0TFSI

21 19 33 2044640/7 August 6, 2019. Supersedes Technical Service Bulletin Group 21 number 19-31 dated March 4, 2019 for reasons listed below.

Model(s)	Year	VIN Range	Vehicle-Specific Equipment
A8	2017	000001 - 019190	4.0L
S8	2017	000001 - 901368	4.0L
S7	2017	000001 - 115286	4.0L
RS7, RS7+	2017	000001 - 904264	4.0L
A8, S7, S8, S8+, RS7, and RS7+	2016	All	4.0L

### Condition

REVISION HISTORY		
Revision	Date	Purpose
7	-	Revised Service (Updated QR code and instructions)
		Revised Warranty (Added Labor Operations)
6	03/04/2019	Revised Warranty (Updated Labor Operations)
5	11/28/2018	Revised Technical Background (Added Note)
		Revised Service (Added QR code and updated Note)
		Revised Warranty (Updated Labor Operations)

#### **Customer statement:**

- The engine cannot be started or only with difficulty.
- The engine makes unusual noises when accelerating.
- The engine has reduced performance.

#### Workshop findings:

• Damage on turbocharger impeller fins causes increased free play on impeller shaft of the turbocharger or there is a broken impeller shaft.

### **Technical Background**

Damage to the turbocharger is rarely directly the result of turbocharger failure. Therefore, it is important to perform further checks to find the root cause, to avoid repeat repairs.

Known causes for turbocharger damage:

- Performance increases by tuned ECM.
- Non-compliance with service intervals.
- Incorrectly fitted oil filter element.
- Leaks in intake tract allowing outside unfiltered air and debris into the turbocharger.
- Poor oil supply to the turbocharger.

### UNote:

If the vehicle has any DTCs related to the turbocharger boost/regulation the complete GFF Test plan must be completed and repairs performed before determining if further repairs are necessary.

#### **Production Solution**

Optimized oil strainer 079115175G for oil supply lines to turbochargers in the cover in the inner valley of the engine. The oil strainer and check valve 079103175C must always be replaced to ensure proper oil flow to the turbochargers.

#### Service

Watch the June Hot Topics before proceeding with the below repair at: https://audiacademy.kzoplatform.com/player/medium/1186073779801953796 (Figure 1).

- 1 Perform the Guided Functions with the diagnosis tester: "01 check warranty information." Then check for an
- entry with the vehicle data in Elsa under warranty key.
  - All information <u>must</u> be documented with pictures with the attached Checklist completely filled out and stored with the Repair Order.
- 2 Check the hardware version of the engine
- . control unit. An X version indicates that the engine control module was replaced/or is modified (Figure 2).

#### First system test with DTC memory entries

Address: 0001 System name: 01	Engine Electronics Protocol versions: UDS/ISOTP
ASAM base version:	BV_EnginContrModul1UDS
ASAM control module version:	EV_ECM20TFS0208W0906259C_001
Hardware part number:	06L907425
Software part number:	8W0906259C
Hardware version number:	H13
Software version number	0004
Build group number:	

Figure 2. Correct hardware version number.

Perform a visual check of the engine control unit (check for irregularities of the housing of the control unit) and check whether a tuning box is fitted (also in the area behind the diagnostic interface).

- 3 Check the intake tract for leaks. Review the repair history for possible previous repairs on the intake tract.
- 4 Measure the oil pressure at idle and 2000 rpm according to Elsa.
- 5 Visually assess the condition of the damaged turbocharger from both sides. No oil marks (charge air and . exhaust side) could be another indication for poor oil supply to the turbocharger.
- 6. Check the oil filter for correct installation and correct filter part number 079115561J. If the oil filter is not centrally fitted, the engine oil may not be filtered, entering the oil supply of the turbocharger due to the crooked position of the oil filter element.
- 7. Check the installation of the oil filter bypass valve according to service measure 17F2.

This TSB is <u>not</u> replacing any Repair Manual instructions, this TSB is meant to supplement the Repair Manual. See Elsa, *Engine* >> 8-Cylinder Direct Injection 4.0L 4V TFSI Engine >> 21 Turbocharger >> Turbocharger, *Removing and Installing.* 

- 8. Replace the turbocharger as well as the **oil strainer** and **check valve** in the inner valley of the engine according to Elsa and observe all instructions, including:
  - Check the oil supply line for through flow and oil deposits.

- Check the oil drain hoses for through flow and oil deposits
- Filling the turbocharger at the supply line connections with engine oil.
- Replacement of the turbocharger wastegate vacuum actuator is no longer necessary. The vacuum actuator and actuator rod can be reused. The existing clip must not be reused and must always be replaced. The retaining clip is now available in ETKA.
- 9. Change the engine oil including the oil filter. Check the drained oil and oil filter for particles. If particles are found, flush the engine and new turbocharger with the new engine oil at an increased engine speed for 15 minutes.
  - If no particles were found in the drained engine oil or oil filter, another oil change is not necessary and the engine does not have to be flushed at an increased idle speed.
  - To ensure the turbocharger is supplied with enough oil, let the engine run at idle for approximately one minute after starting, do not increase rpm.

Failure to follow the TSB and Elsa instructions may lead to premature turbocharger failure which may be reviewed by Warranty.

Warranty may review the claim and request the turbocharger that was replaced. Documents and pictures may be requested to be sent to the Warranty Parts Return Center.

#### Warranty

Claim Type:	• 110 up to 48 Months/50,000 Miles.		
	G10 for CPO Covered Vehicles – Verify Owner.		
	• If the vehicle is outside any warranty, a only.	this Technical Servio	ce Bulletin is informational
