TITLE:

Procedure to install the latest level ECU & TCU .crp programs for Evora GT 2020 model year vehicles.

REASON:

A limited VIN range of vehicles have left the factory without the latest level .crp programs being installed within the ECU (Electronic Control) and TCU (Transmission Control) units.

Latest level programs required*Unit Level/number Reason for update*

ECU C132E0288 Correct VVT Error - false/unnecessary setting of diagnostic trouble code P0014 for exhaust timing over-advanced or system performance (bank 1)

TCU B132F0395 Correct a shift/control error

These latest level programs **MUST** be installed into the affected vehicles as soon as possible, (such as at the time of pre-delivery inspection etc). An affected vehicle **CANNOT** be handed over to the customer before these updates are performed. These programs are now available, but at this time Lotus TechCentre **DOES NOT** include the option to download these .crp files.

ACTION:

- As a temporary measure the .crp files have been added to the Lotus Dealer Portal. Once downloaded, these files can be installed into any affected vehicle using your Lotus TechCentre laptop* and VCD (Vehicle Communication Device) part number T000T1472F.

*Although Lotus TechCentre is not required for the update procedure, the dedicated TechCentre laptop must be used as the required VCD software is already installed.

- Check and identify any affected vehicles from your inventory stock, dealer demonstrators and customer records and ensure that this campaign action is performed at the first opportunity.
- Affected vehicles will be displayed if their VIN is entered on DC611 on Lotus Dealer Connect (campaign number 2019/13). A VIN list is also shown on page 3 of this bulletin.

Lotus TechCentre Laptop Preparation:

1. From the home page of the Lotus Dealer Portal the .crp program zip files are located in: Aftersales>'Evora GT ECU and TCU .CRP FILES FOR FEDERAL VEHICLES' folder, (highlighted in yellow).

2. Download the zip file and save it onto the desktop of your Lotus TechCentre laptop.

Download view shown using Windows 10 operating system in conjunction with a Google Chrome web browser, the downloading procedure may vary dependant on laptop operating system and web browser used.

Note: The process shown below is for the C132E0288 ECU file, follow the same procedure to also download the B132F0395 TCU file.

If the file is initially downloaded as a zip folder, follow steps 3 - 7, but if the file is downloaded as an unzipped folder then proceed straight from step 7.

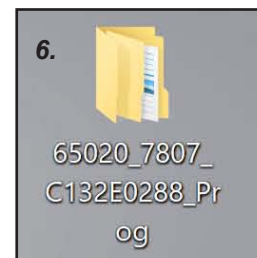

3. 'Right click' on the folder and select the 'Extract All' option from the message window.

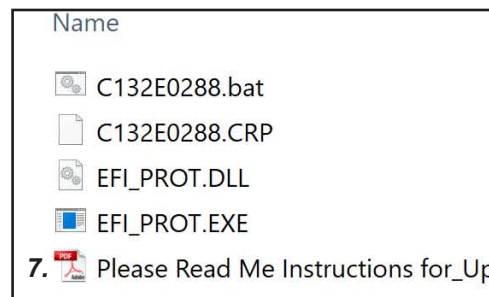

4. Using the 'Browse' button Select 'Desktop' from the folder/drives window.

5. Select the 'Extract' button.

6. An unzipped folder should now be visible on the desktop.

7. Open the folder and select the 'Please Read Me Instructions For Update' prior to performing the program update.

Note: The programs contained within the files will **NOT** successfully run if the EXE file contained within the folder is activated whilst still located within the zip file.

The file extraction method shown may vary dependant on the operating system your laptop is running. The original downloaded zip file is no longer necessary and can be deleted.

To ensure that Lotus Cars has a record confirming that the calibration ID's are now updated for that specific VIN, please take a screenshot of the Lotus TechCentre 'Vehicle Information' screen once the vehicles ECU and TCU programs are updated and forward the screenshot with the relevant VIN and claim number information to Lotus Cars USA (**Brian/Dave please confirm email address**).

CHARGES:

Labor time for carrying out this procedure may be claimed by submitting a bulk entry claim on Lotus Connect, option DC603, Bulk Entry Campaign, campaign number 2019/13, for 0.6 hrs.

Ends.
