

Service Bulletin

34-082

Section

34 - Lighting and Wiring

Description

V-CAN Overlay

Release Date

8/30/2019

Introduction

Model 579 and 567 vehicles built from 5/16/16 to 1/14/19 are susceptible to noise interference due to incorrect V-CAN wiring in the roof harness. A service procedure for installing a V-CAN overlay in 2.1M cabs, pre-VECU, equipped with Bendix Fusion is now available to correct this issue.

Resolution

Fix-as-Fail

Untwisted V-CAN wiring in the roof harness is susceptible to interference from noise sources, including the CB radio, in some model 579 and 567 vehicles. Other issues include dash and speedo dropout, ABS telltale blinking, and [Bendix display sounding during queuing](#) of the CB microphone. The V-CAN wiring overlay has corrected twisting and splice locations of V-CAN in the roof harness.

Warranty

- 1.5 hours to install the V-CAN overlay. Use Quick Claim code 34082.
- Direct Fleets and Dealer Sponsored Fleets (DSF) may not use quick claims when submitting for repairs on chassis related to this bulletin. They must submit a long form specifying part numbers, quantities, and pricing for parts used in the repair. Submittal of a Quick Claim for repairs made by the fleet will be denied as pricing is incorrect on quick claims.
