Latest Vehicle Concern Fixes

Range Rover Evoque Stall at a Stop and can be Restarted	2020 Range Rover Evoque
Customer Voice: • The vehicle stalled at a stop. • The car stalled when accelerating from a stop. **Technical Description:** • No relevant DTCs are stored. • The vehicle can be restarted on the next ignition cycle. **Status:** • This is currently under investigation. • Perform diagnosis and repair of any DTCs that are present and perform a thorough smoke test of the complete intake and exhaust system. Repair any leaks as necessary and raise an EPQR with your findings. • If no root cause can be identified for the stall complaint after complete diagnosis, raise a TA for diagnostic support and include the flight recorder data for evaluation. • Also include as much detail as possible about the conditions during the event.
