

White Residue on Wind Deflector?

AFFECTED VEHICLES

Year	Model	Trim
2019-20	RDX	ALL

Does your client notice white smudging on the wind deflector? Moisture interacting with the wind deflector is the reason why.

There's no need to replace the wind deflector. Just wipe away the residue with a damp, commercially available magic eraser or similar product, and dry the mesh fabric before closing the panoramic roof glass.
