

WKG8 Workshop campaign – Re-coding airbag control unit

Version 2

Update 10/17:

Please note that the WKG8 campaign has been temporarily suspended.
This issue does not have any impact on vehicles for which the campaign has been already carried out.
For all vehicles without an open PQIS-line, the campaign will be temporarily suspended.

We are working on the solution and will get back to you as soon as the updated remedial measure is available.
You will then also get information about how to proceed for vehicles on which the campaign has already been carried out.

WKG8 Workshop campaign – Re-coding airbag control unit

Overview

The airbag control unit on the affected vehicles was coded with an incorrect data record.

As a result, the Event Data Recorder (EDR) function is activated although this is not yet approved for the vehicle type. This function can be used to record certain historical data without the customer's consent in the event of an accident.

To deactivate this function again, the airbag control unit must be re-coded using an updated data record.

Model type	911 Carrera (992)
Model year	2020
Number	885

Required software

PIWIS Tester 3 test software version	38.750.000 (or higher)
--------------------------------------	------------------------
