Product Improvement Notice - New extrusion for 07 series baggage doors

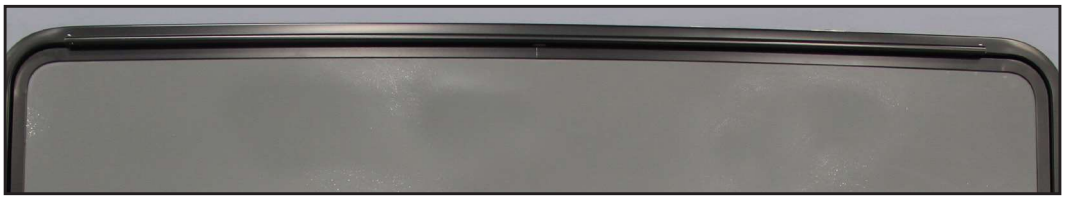

Dear Valued Customer:

Please be advised LCI is changing the extrusion on our 07 series baggage doors to improve fit and function.

The new extrusion has a flange to divert water away from the seam. The extrusion also has a tighter tolerance in the hinge area that provides a tighter fit and smother function between the seam and door.

For replacement, if a door is damaged a new door can be inserted into the existing frame. Due to the change in profile, however, only a new hinge-side door will work with a new hinge-side frame, and vice versa with the current door/frame.

New Extrusion/Flange Close-up

There is no other change in fit, form or function with the new hinge extrusion. There is no change in part number for the door and no change in price. The change is expected to begin in November.

If you have any questions, please feel free to call me directly or your LCI representative. We value and appreciate your business and partnership.

Sincerely,

Scott McKinnon
