2008-2009 Eos Service Reminder Reset

Resetting the service interval display

If the schedule maintenance service was not done by a Volkswagen dealer, the service interval display function must be reset as follows:

- With the ignition off, press and hold the **0.0** trip odometer reset button.
- Switch the ignition on. The service interval function is now in reset mode.
- Let go of the **0.0** button and, within 20 seconds, briefly press the **MIN** clock reset button. After a short time, the screen switches back to the normal display. The reset mode is cancelled if the **MIN** button is not pressed within 20 seconds, or if the vehicle is driven before resetting is complete.

Tips

Do **not** reset the service interval function between scheduled maintenance intervals; doing so will result in an incorrect display.

2010-2011 Eos Service Reminder Reset

Resetting the Service Interval Display

If service was not performed by a Volkswagen dealer, the display must be reset as follows:

- Use the rocker switch on the windshield wiper lever or the buttons in the multi-function steering wheel (where applicable) to select the **Settings** menu.
- In the **Service** submenu mark the **Reset** menu item and press the **OK** button in the windshield wiper lever or the multi-function steering wheel (where applicable) to reset the Service
- Interval Display. Confirm the subsequent security check with **OK**.

Tips

- If you reset the service display yourself, the next service is displayed after 9,320 miles (15,000 km) or one year. The service interval is not determined individually.
- Do **not** reset the service interval function between scheduled maintenance intervals; doing so will result in an incorrect display.
