Technical Background

In some cases a high pitch squeal from the front brakes while applied causes the parking aid sensors to trigger. This may only happen when the front brakes are cold.

Service

- Test drive the vehicle until the brakes have been warmed up, or the squeal noise is no longer present.

If the parking aid sensors do not trigger when the brake squeal is not occurring:

- Check for ridges worn into the brake pads or brake discs causing the squeal.

If there are no ridges worn into the brake pads or brake discs:

- Deglaze the brake pads.

If there are ridges worn into the brake disc:

- Replace the front brake pads and brake discs.
