## Technical Background

High voltage battery maintenance as related to long term storage of an eGolf.

## Service

During long term storage of an eGolf, it is recommended to recharge the high voltage battery every 4 months.

- If the vehicle is parked for a long period with a discharged high-voltage battery, irreversible damage can be caused to the high-voltage battery.
- Self-discharge of the high-voltage battery, e.g. due to the vehicle standing for periods of several months, can lead to the high-voltage battery being damaged if ambient temperatures are extreme and the high-voltage battery has a low charge level. Always make sure that the high-voltage battery is sufficiently charged.
- If the high-voltage battery is new or has not been charged for a long time, the maximum charge of the high-voltage battery will probably not be reached until after several charging cycles. This is for technical reasons and does not represent a vehicle malfunction. If it is generally not possible to fully charge the high-voltage battery, have the high-voltage battery checked in a qualified workshop.
