Tailgate Tail Lamp Flicker

New RR Evoque 20MY

Problem Description:

- The tail lamps on either side of the tailgate may flicker briefly when the brake lamps are illuminated continuously for 30+ minutes in high ambient temperatures due to thermal protection of the LED lamp board.

Current Status:

- Root cause identified as current flow being too high, causing excessive heat.
- Engineering is working on a change to the lamp circuit board.

Recommended Actions:

- Should you find a vehicle with this concern, please report it via EQPR.
