

# ***Corrosion Protection***

## **EFX and HDX**

“TuffCoat” corrosion protection is now available on fuel tanks for the EFX and HDX transit model buses.

This coating is the same polyurea material used on C2 fuel tanks.

The “TuffCoat” polyurea completely encapsulates the fuel tank, helping prevent corrosion, abrasion, impacts, and deicing chemicals.

This new feature is available on orders submitted after 03/18/2019  
Change orders will not be accepted for orders currently in-house

The required size fuel tank must be ordered in conjunction with this option

**NOTE: Due to coating process time, minimum bus build schedule date for this option will be 8 weeks.**

Feature	Description	Action
C1519-01-000	POLYUREA COATING STEEL FUEL TANK	Released.
