

57 Power closing door latch is intermittently inoperative

57 20 63 2058159/1 January 8, 2020.

Model(s)	Year	VIN Range	Vehicle-Specific Equipment
Q7	2017 - 2019	All	With Power Closing

Condition

Customer states:

- The power closing door latch system intermittently does not work and the electronic parking brake warning is displayed in the instrument cluster.
- The door closes and latches properly otherwise.

Workshop findings:

• The door striker stops in the pre latch position and the door is not closed via the power closing door system.

Technical Background

The door latch requires counter-pressure from the door/door seal, in order to generate a reliable signal for the door control module that the customer wants to close the door. If the door striker is adjusted in such a way that does not provide enough counter-pressure for the latch, the door control module does not recognize the door latch signal long enough or at all. Hence the door will not be closed.

Production Solution

Not applicable.

Service

Before performing any repairs as outlined in this TSB, please check any applicable TSBs (e.g. TSB 2051540: 57 *Power closing door latch is intermittently inoperative* for MY18) to ensure that the door control modules have the latest software levels installed. Perform any software update related TSBs prior to proceeding with this TSB.

If the customer concern persists with the latest door control module software installed, perform the following steps:

1. Check the door striker to latch alignment and perform any adjustments necessary to center the striker to the latch.

 At the same time, adjust the door striker inward as far as possible (at least 0.5 mm) (Figure 1). The front door can be flush or slightly underflush to the rear door without causing a wind noise concern (Figure 2).

Figure 1. Adjust door striker inward by at least 0.5 mm.

Figure 2. The front door can be flush or slightly underflush to the rear door.

3. Recheck the functionality of the power closing door latch system. If after the striker adjustment the door closes properly, do not proceed with any additional repairs.

 If the customer concern still persists, install a new outer door seal with an inward offset of 1.0 mm when compared to the original door seal location (Figure 3).

Tip: Mark the position of the original outer door seal prior to replacing it.

Figure 3. Install the new outer door seal with an inward offset by 1.0 mm.
