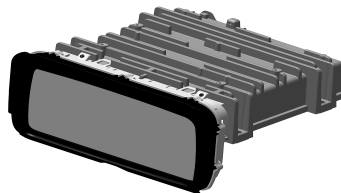

Figure 1. Boom! Box GTS

Parts will be available on November 29, 2019.

FILE FOR FUTURE REFERENCE

Genuine Harley-Davidson vs. Aftermarket

The Boom! Box GTS radio is a feature-rich vehicle infotainment hub. In addition to delivering music, the GTS communicates with the vehicle and informs the rider with navigation details, provides engine and fuel information and provides ride summary specifics such as average speed, distance traveled, fuel used/stops.

Another benefit is the level of integration. No other competitive unit is more integrated with the vehicle and tested with the same rigor as the original equipment Boom! Box GTS radio.

When the Boom! Box GTS replaces the existing radio it is not simply a screen update but rather a complete Infotainment computer refresh.
