Check Engine MIL with DTC P026B

Customer Voice:

- The Check Engine MIL is on.

Technical Description:

- P026B and a cylinder specific Injector Timing DTC stored in the PCM.

Status:

- Fix in development
- Inspect injector connectors pay close attention to terminal tension and seating in the connector housing - drag test and compare to cylinders that are not setting an individual cylinder DTC.
- Check the ground circuit for the individual injector setting the DTC paying close attention also to terminal tension at the PCM connector C1E122A.
- If no fault is identified a revised PCM calibration will be released to resolve this by the end of January.
