

#### 20 MIL on or difficulty refueling, DTC P045100, P044100, P202500, and/or P045300 stored in the ECM

20 20 25 2050276/5 February 12, 2020. Supersedes Technical Service Bulletin Group 20 number 19-24 dated December 18, 2019 for reasons listed below.

Model(s)	Year	VIN Range	Vehicle-Specific Equipment
A6, A7	2016 - 2018	All	3.0T

#### Condition

REVISION HISTORY			
Revision	Date	Purpose	
5 - Revised header (Extended applicable VINs)		Revised header (Extended applicable VINs)	
		Revised Required Parts and Tools (Updated tool number)	
4	12/18/2019	Revised header (Added Model)	
3	11/15/2019	Revised title	
		Revised header (Added MY2018 and DTCs)	
		Revised Condition (Added DTCs)	
		Revised Service (Added steps and photos)	
		Revised Warranty (Updated and added Labor Operation)	
		Revised Required Parts and Tools (Added parts and updated)	

#### Customer has one or more of the following concerns:

- The customer has problems filling the fuel tank (fuel nozzle keeps clicking off).
- MIL may be illuminated.

#### Workshop findings:

• Water and/or ice is found in the EVAP canister reservoir and natural vacuum leak detection (NVLD or J909) pressure switch.

One or more of the following DTCs is found in the engine control module (ECM), J623 (address word 0001):

- **DTC P045100** (pressure sensor for the tank ventilation system, implausible signal).
- DTC P044100 (tank ventilation system, through-flow faulty).
- DTC P202500 (Evaporative Emissions (EVAP) Fuel Vapor Temperature Sensor Performance).
- DTC P045300 (EVAP Emission Contr.Sys.Press.Sensor High Input).

#### **Technical Background**

Water enters through the tank ventilation system. The water can flow through the NVLD pressure switch into the EVAP canister and freeze in cold temperatures.

#### **Production Solution**

Not applicable.

#### **Service**

Figure 1. How to determine which steps to take Version 1 (~4mm gap) or Version 2 (gap less than 2mm).

#### Version 1 (A6 only):

- 1. If the updated wheel liner has not yet been installed. Then install the updated wheel liner, which has closed slots around the NVLD filter.
  - Remove the EVAP canister, ventilation tube, and NVLD pressure switch.
  - Remove all components mounted on the EVAP canister.

2. Weigh the EVAP canister:

- If it weighs more than 2650 grams, replace the EVAP canister + attached filter, ventilation tube (Figure 2), and NVLD pressure switch (J909).
- If it weighs less than 2650 grams, replace the ventilation tube, and the J909.

Figure 2. Ventilation tube of the EVAP canister.

#### Version 2:

If updated wheel liner has already been installed at previous repair or in the factory, the NVLD filter needs to be relocated into the engine compartment to prevent moisture entering the EVAP system, under extreme customer use conditions.

- 1. Replace the EVAP canister only if weight is greater than 2650 grams.
  - Install a new J909.
  - Install the NVLD filter (new part number, Version 2) in the engine compartment on the left frame rail just in front of the ABS module, secure with M6 nut. (Figure 3).

Figure 3. Installing the new NLVD filter.

 Connect the filter to the 5/8" ID rubber hose via 1x plastic elbow and 1x rubber elbow (Figure 4).

Figure 4. Connecting the NLVD filter.

Route the 5/8" ID rubber hose behind the strut and brake lines from new filter position to the J909, along the orange battery cable (Figure 5 and 6). Then secure with zip ties.

5/8" ID rubber hose needs to be routed in a way that there are no sharp bends to prevent kinking.

*Figure 5.* Route the 5/8" ID rubber hose from new filter position to the J909.
