SUBJECT:

POWER DOOR LOCK OPERATION

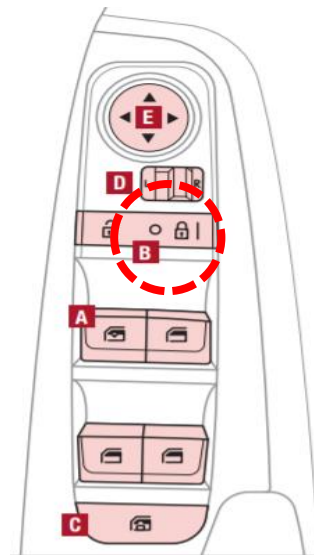

This Pitstop provides information regarding the power door lock function on 2021MY Seltos (SP2) vehicles. The door lock system functions differently than on previous Kia models.

When pressing button (A) on the Key Fob, or pressing the inner door lock switch (B), the door locks will not actuate to 'lock' if there is an open occupant door. The power door locks will only actuate when all occupant doors are closed (rear door/tailgate may be closed or open).

Note: This is normal operation of the door lock system.
