Technical Background

To help identify the purpose of the Driver Assistant Button on the Turn Signal Stalk.

Service

On Touareg models equipped with driver assistant systems, there may be a button on the end of the turn signal stalk that when pressed, can switch ON/OFF certain driver assistant features. This information becomes important if the customer is attempting to activate driver assistant features through the MFI display in the instrument cluster - **J285**- and/or the infotainment system. If the customer is unable to activate these systems, or they appear to be grayed out, they may be switched OFF. Press the driver assistant button on the end of the turn signal stalk, pictured below, and check if these functions are now switched ON and able to be modified as needed. If so, please coach the customer on the operation of this switch and its function.
