

91 MIB1 Audi connect and Online Services are inoperative with the SIM not recognized

91 20 56 2045723/4 April 9, 2020. Supersedes Technical Service Bulletin Group 91 number 17-52 dated September 25, 2017 for reasons listed below.

Model(s)	Year	VIN Range	Vehicle-Specific Equipment
A3	2015 - 2016	All	MIB High with Audi connect

Condition

REVISION HISTORY			
Revision	Date	Purpose	
4	-	Revised Service (Updated SVM code)	
3	09/25/2017	Revised Warranty (Updated Labor Operations)	
2	01/26/2017	Revised Warranty (Added software update to Labor Operations)	

The customer states that there are no online services available via the inserted SIM card. The inserted SIM card cannot be recognized by the MMI (Figure 1).

Figure 1. SIM is not recognized.

Technical Background

The internal USB port for the phone module does not initialize. Therefore the phone module is not recognized in the information electronics control module 1, J794 (address word 005F), and as a result, any SIM inserted into the MMI cannot be utilized.

Production Solution

A new telephone module and software were implemented in the model year 2017.

Service

Check the SIM card slot and SIM card for damage and verify the customer's Audi connect account is active.

- Verify the customer's Audi connect account is active and has not reached its data limit using the Audi connect subscription portal found at URL: http://www.myaudiconnect.com/. If at any time you are unsure, please contact the Audi connect Dealer Support line at 1-877-505-2834.
- Visually check the internal SIM card slot of the MMI with a flashlight to ensure it is free of debris and any outside influence (internal damage) inside the SIM card slot. Visually compare to a known working car.

Check if any of the following concerns apply:

- 1. The SIM card in the Information electronics control module 1 is not recognized, as seen in Figure 1. If data signal bars are seen, then this TSB does not apply. For this scenario, the customer's data plan has reached its limit, or the Audi connect subscription account is not active.
- 2. Use the dealer demo AT&T LTE SIM card in the customer's car and confirm the same behavior is seen (SIM not recognized). If a different SIM card works in the customer's car, then the customer's SIM card will need to be replaced, and this TSB does not apply.
- 3. Verify whether or not the customer's SIM card works in another vehicle that has LTE support (All MIB1 or MIB2 not including the 2017 A3/Q7/A4 with eSIM). If the customer's SIM card does not work in a different car, then the customer's SIM card will need to be replaced, and this TSB does not apply.
- 4. If none of the SIM cards work in the customer's car, then check the measured value blocks of the information electronics control module 1, J794 (address word 005F), and verify the SIM card is shown as "not available." Keyword search "SIM" to find the applicable MVB.

If it is determined the customer's SIM card and Audi connect subscription are okay, and the SIM cannot be recognized in the customer's MMI, then the telephone module must be replaced in the MMI.

Before attempting the repair, please review the video of the repair procedure: https://audi-external.kzoplatform.com/swf/player/326 (Figure 2).

Figure 2. QR Code for supporting video.

Required equipment:

- VAS 6613 ESD Work Surface
- T8 inner TORX screwdriver
- Utility knife
- MIB1 Telephone module repair kit (includes telephone module and warranty seal)
- MIB1 Software Update on SD card (See required parts & tools information table below)
- SVM code listed in steps below

Time to complete update:

- · Approximately 45 minutes for the telephone module swap with MMI removal & reinstall
- Approximately 1hr for the MMI software update with SVM work

U Note:

- 1. This repair will expose the internal sensitive electronic components of the MMI.
- 2. Ensure absolute cleanliness of the working environment.

3. All repair steps must be performed without using a high amount of force, specifically when prying and pulling is involved.

- 4. Ensure you and the control module are always connected and grounded to the ESD work-bay at all times.
- 5. If there isn't an ESD protective mat available, then the repair must **not** be performed.

REPAIR PROCEDURE

1. **Important:** Before removing the control module, take out all inserted media such as SD cards, CDs, and the SIM card.

- 2. Remove the information electronics control module 1, J794 (address word 005F) from the vehicle according to the Elsa repair manual.
- 3. Place the ESD work-bay VAS 6613 in an area free of dirt and dust (Figure 3).

4. Connect the plug of the ESD work-bay to the

the work-bay instructions provided in the VAS

 Stick the supplied repair sticker with the label - A 274 - on the information electronics control module 1, J794 (address word 005F) (Figure 14).

Figure 14. Apply a new warranty label.

- 15. Refit the information electronics control module 1, J794 (address word 005F), according to the repair manual.
- 16. When the control module is refitted, update the infotainment system with SD card 8V0906961AF and record the new software version (SW0406) via the SVM code included on the SD card. Reference the attachment "*MIB1_Software_Update_Instructions.pdf.*"

SVM code and SD card part numbers were updated in March 2020. SD Card software can be downloaded using the SD Creator PC Desktop application.

- 17. Always ensure you perform a successful SVM online coding, adaptation, and calibration using the SVM code provided in the update (see SVM table below).
- 18. When the update is completed, check whether the online function works. Proceed as follows:
 - 1. Insert a data-enabled AT&T LTE SIM card into the SIM card reader and start the Audi connect services.
 - 2. Verify the SIM card icon in the MMI changes to cellular signal bars.
 - 3. Verify the active data transfer arrows appear over the bars after 30-60s.
 - 4. Use an Audi connect feature to verify the system is working correctly (Wi-Fi, or check Weather).
