Bioesque Botanical Disinfectant Solution

Flyer part number: PNABIOESQUE
Replaces all previous bulletins bearing this number.

Attention: **Porsche Parts Managers**

Information: Bioesque® Disinfectant for Authorized Porsche Dealerships - Sample spray bottle

To help Porsche service centers meet increased customer demand for sanitized vehicles, Porsche has approved Bioesque® Botanical Disinfectant for use on Porsche vehicles. When used as directed, it kills the COVID-19 virus plus other bacteria and viruses on automotive interior/exterior surfaces in 4 minutes.

Use as directed on car interiors and public touch points so you can determine this disinfectant's effectiveness for your service operations. Bioesque® also disinfects high traffic areas in your dealership.

Due to the need to quickly meet current requirements

at Porsche dealerships, Porsche has done no testing to independently confirm this product's efficacy for virus killing or compatibility with our interior materials. However, Bioesque® is on the American Chemistry Council's list of EPA pre-approved coronavirus-fighting products. Tests for compatibility on leather upholstery have been conducted by our Bioesque® supplier. See backup documentation in PPN/ AfterSales and use the search term, "Bioesque."

Bioesque® Disinfectant stock will be available for order through the **Porsche Service Products Program** portal in mid-April 2020.

General notes:

- The manufacturer stipulates leaving the disinfectant on all surfaces, soft or hard, for 4 minutes. This gives the best results for killing the COVID-19 virus.
- The disinfectant has a lemongrass-grapefruit scent.

Make sure your customers are informed about the scent before starting the cleaning/disinfecting process.

- We do not recommend steam cleaning because of excessive moisture ingress to leather and other porous materials, plus the possibility for water droplets and streaks to form on interior surfaces.

How to use Bioesque Disinfectant on automotive vehicle interior/exterior surfaces

Metal, plastic, and other smooth surfaces such as varnished or lacquered wood:

- Use a microfiber cloth to apply Bioesque® Disinfectant and do not spray directly on vehicle interior surfaces. We recommend the Tequipment Microfibre Cleaning Cloth (Part number: 000 044 001 95) for this purpose.
- Test first on an inconspicuous area.
- Leave the disinfectant on the surface for 4 minutes. This time span is required to help ensure the surface is disinfected.
- To avoid streaks, wipe surfaces with a wet cloth after disinfecting and use distilled water if possible.
- Change the cloth after use on each vehicle to help ensure a thorough sanitizing process
- For small and hard to reach areas in the vehicle interior, spray Bioesque® Disinfectant onto a microfiber cloth, then apply to the surface. Pay special attention to areas frequently touched by hands (steering wheel, gear shift knob, seat belts and seat belt latches, door handles, seating, armrests, center console, vent knobs, buttons, switches, and especially the car keys).
- Do not spray directly on the dashboard touch screen or infotainment touch screens. Use microfiber cloth and follow the above procedure.
- Using a clean microfiber cloth, wipe all areas clean.
- Do not re-use the microfiber cloth on another vehicle. Wash the microfiber cloth before using again.

Leather & Vinyl: unlike smooth surfaces such as metal or plastic, porous and soft surfaces like leather and vinyl are more difficult to disinfect. For maximum effectiveness, follow these steps in order:

- Test first on an inconspicuous area.

- Apply disinfectant to a clean microfiber cloth, then wipe the leather or vinyl surface.
- Leave the disinfectant on the surface for 4 minutes. This time span is required to help ensure the surface is disinfected.
- To avoid streaks, wipe surfaces with a wet microfiber cloth after disinfecting. Wiping down with distilled water will decrease streaking afterwards.

The manufacturer cannot guarantee effectiveness on a porous surface, but the above steps are the best way to help ensure a thorough cleaning of leather and vinyl surfaces.

How to Use Bioesque® Disinfectant in Your Dealership Showroom and Fixed Operations Areas

- Test first on an inconspicuous area.
- Areas that are soiled and dirty should be cleaned first with soap and water.
- Spray directly on flat surfaces such as tables and counters, and let stand for 4 minutes.
- Wipe with clean microfiber towel.
- For buttons and switches on appliances and devices, apply to a clean microfiber cloth and wipe. Do not spray electronic devices, keyboards, monitors, computers, tablets and phones with the disinfectant product. Spray the microfiber cloth, wipe these objects down, then let stand for 4 minutes.
- Soft surfaces like leather and vinyl on chairs are difficult to disinfect. See instructions for "Leather & Vinyl."

As with all cleaning products, test in an inconspicuous area to ensure surface compatibility.
