

WLF2 Stop Delivery - Check wiring harnesses of the front belt buckles and replace seatbelt buckles if necessary

Version 1

WLF2 Stop Delivery - Check the wiring harnesses of the front seatbelt buckles and replace seatbelt buckles if necessary

Vehicle blocking

Vehicles must not be delivered to customers until the required remedial measure has been carried out. Therefore, please carry out following Stop Delivery, immediately.

Overview

On the affected vehicles, it is possible that the wiring harness of the seatbelt buckle on the driver and passenger side has been incorrectly fitted. If this is the case, the wiring harness may be damaged. As a result,

adaptive cruise control (ACC) functions are not available and a warning message will be displayed in the instrument cluster accordingly.

To avoid this, the positioning of the front wiring harness of the seatbelt buckle must be checked. Depending on the test result, the wiring harness must be repositioned or the seatbelt buckles replaced if necessary.

Model type	Taycan Turbo (Y1A), Taycan Turbo S (Y1A)
Model year	2020
Number of affected vehicles	4

Vehicle usage

The vehicles may only be driven for loading and unloading purposes in the transport chain. Further use is not permitted. Test drives are to be omitted.

Test instructions and remedial measures

See attached.

Please order parts as needed, based on findings.
