CONSUMER NOTICE: The information and instructions in this bulletin are intended for use by skilled technicians. Mazda technicians utilize the proper tools/ equipment and take training to correctly and safely maintain Mazda vehicles. These instructions should not be performed by "do-it-yourselfers." Customers should not assume this bulletin applies to their vehicle or that their vehicle will develop the described concern. To determine if the information applies, customers should contact their nearest authorized Mazda dealership. Mazda North American Operations reserves the right to alter the specifications and contents of this bulletin without obligation or advance notice. All rights reserved. No part of this bulletin may be reproduced in any form or by any means, electronic or mechanical---including photocopying and recording and the use of any kind of information storage and retrieval system ---without permission in writing.

The warming is caused by heat radiating from the rear heater core, which is located under the console. The warm air created by the heater core escapes through small gaps and carries heat along the inner walls of rear console / cup holder, causing an increase in temperature.

Customers having this concern should have their vehicle repaired using the following repair procedure.

REPAIR PROCEDURE

1. Verify the customer concern.

NOTE:

- Before beginning this repair, inform the customer of 1) the cause of the symptom and 2) that this repair cannot guarantee a perfect thermal isolation.
- If the customer still experiences this concern after the repair, instruct them to turn on the rear A/C to expel the heat from the console interior.

2. To reduce heat transfer, install the Seals (A and B) and the insulator onto the bottom of the rear console according to the following instructions.

SPACER SET / INSULATOR INSTALLATION:

SPACER SET (TKY1-55-180)

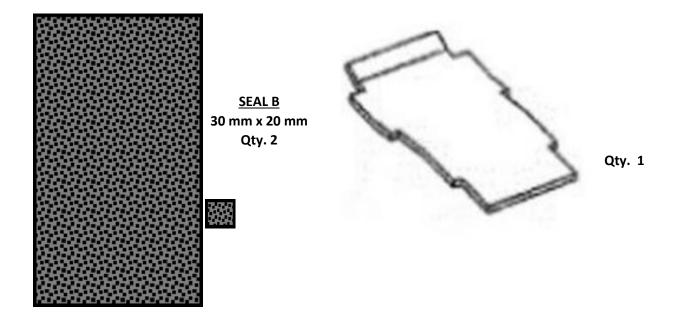

INSULATOR (TK48-55-165)

<u>SEAL A</u> 100 mm x 270 mm Qty. 3

2. Thoroughly remove all the white insulator (1) from the bottom of the rear console.

NOTE: Make sure there are no leftover pieces of insulator. Use parts cleaner to remove any stuck insulator remains.

(1) After Insulator Removal

3. Place the first 100 mm x 270 mm SEAL A (1) in the marked location (as shown below (left)), then adjust the center of the seal according to the dotted line (as shown below (right)).

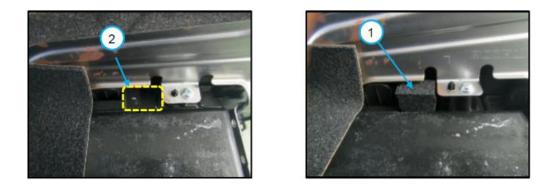

4. Place both 30 mm x 20 mm SEAL Bs (1) in the marked locations (2) as shown below. One seal on each side of the rear console.
