PURPOSE

A customer may report a water temperature warning light after coolant leakage occurs. This may happen when stones from the road enter through the bumper opening and damage the radiator core tube.

This TSB instructs dealers how to install a new radiator and add an EPDM sponge which covers the exposed radiator core.

AFFECTED VEHICLES

2014 - 2020 Outlander

REPAIR PROCEDURE

Replace the radiator with a new one and install the EPDM sponge (packing) covering the exposed radiator core referring to the steps below.

1. Clean the attaching face of the radiator.
2. Remove the peeling seal.

3. Attach on the bottom of condenser (bottom of concave).

4. Remove the side peeling seal.

- Adhere/push the sponge toward the red line in the diagram so that it is attached on the side of the radiator tank.

Confirm the sponge is firmly attached and does not come off.
