

### 91 SOS warning displayed in instrument cluster, DTCs B105313 and B153313 stored in the data bus diagnostic interface

91 20 79 2054630/2 June 19, 2020. Supersedes Technical Service Bulletin Group 91 number 19-55 dated April 25, 2019 for reasons listed below.

Model(s)	Year	VIN Range	Vehicle-Specific Equipment
A4, A4 Cabriolet, A4 allroad, and S4	2017	N000001 - N043557 Or A000001 - 128700	With connected gateway
A5, A5 Sportback, A5 Cabriolet, S5, S5 Cabriolet, and S5 Sportback	2018	000001 - 018466	With connected gateway
Q5, SQ5	2018	000001 - 040274	With connected gateway

### Condition

#### **Customer states:**

• Yellow warning lamp for the SOS system (Figure 1) is shown in the instrument cluster with the message "Emergency call function: malfunction! Restricted functionality. Please contact Service".

Figure 1. Yellow warning lamp.

#### Workshop findings:

One of the following DTCs is stored in the data bus on board diagnostic interface, J533 (address word 0019):

• DTC B105313 (GSM antenna Open circuit).

• DTC B153313 (GSM antenna 2 Open circuit).

### **Technical Background**

Poor contact at one of the coaxial wiring's FAKRA connections between data bus on board diagnostic interface, J533 (address word 0019) and one of the external antenna's for emergency call services.

### **Production Solution**

Improved FAKRA connector.

#### **Service**

Overv	Overview		
i	<b>Tip:</b> The location of the antenna, gateway, and connections vary by model. Be sure to consult the applicable wiring diagram and installation locations for the vehicle you are working on.		
i	<b>Tip:</b> Certain vehicles may have more than one external GSM antenna. Be sure to identify the antenna circuit which applies to the DTC found in the data bus on board diagnostic interface, J533 (address word 0019).		
i	<b>Tip:</b> When utilizing the VAS 6720 to perform a repair, ensure that the new connection is not under tension. The cable may need to be extended utilizing the VAS 6720 to avoid placing tension on the replaced FAKRA connector.		
i	<b>Tip:</b> The information in the manual for the VAS 6720 regarding the ban of repairs on the emergency call aerial wiring does not apply to repairs instructed by a TSB

#### Section 1:

Inspect connection at the data bus on board diagnostic interface, J533 (address word 0019):

1. Perform a visual inspection of the cable and connector.

Replace the contact utilizing the VAS 6720 if:

- There is tension on the cable. The cable should have some slack.
- The pin is bent or cracked.
- The cable is bent or damaged.
- The connector is not fully connected.

## **Technical Service Bulletin**

- 2. Perform a function check of the cable connector:
  - View the applicable measured value from the overview table above.
  - Lightly pull, or push the applicable coaxial cable along its respective X, Y, and Z axis (Figure 2).
  - As the fault detection is not real time, hold the cable in each position for 5 seconds and observe the measured value (Figure 3).

Figure 2. Coaxial cable X, Y, and Z axis.

 If a fault is detected during step 2 ("Open Circuit"), replace the contact on the wire harness at the data bus on board diagnostic interface, J533 (address word 0019) utilizing the VAS 6720.

If no fault is detected, continue to the next section.

#### Section 2:

Inspect the connector at the Coupling Point in Interior, Center (TIM):

- 4. Locate and gain access to the T2dkx and T2dk FAKRA connectors, located inside the TIM Coupling Point. Consult the applicable wiring diagram and repair manual for the vehicle you are working on.
- Perform a visual inspection of the cable and connector at and between T2dkx and T2dx. Replace **both** contacts utilizing the VAS 6720 if:
  - There is tension on the cable. The cable should have some slack.
  - The pin is bent or cracked.
  - The cable is bent or damaged.
  - The connector is not fully connected.
- 6. Perform a function check of the cable connector:
  - View the applicable measured value from the overview table above.
  - Lightly pull, or push each side of the applicable coaxial cable along its respective X, Y, and Z axis.

As the fault detection is not real time, hold the cable in each position for 5 seconds and observe the measured value (Figure 3).

7. If a fault is detected during step 6 ("Open Circuit"), replace the contacts of both the T2dkx and T2dx connectors utilizing the VAS 6720.

If no fault is detected, continue to the next section.

#### Section 3:

Perform Coax Overlay:

**Tip:** Vehicle Dashboard must be removed to complete repair. Consult the applicable repair manual for the vehicle you are working on.

8. If no fault was found in Section 1, and no fault was found in Section 2:

Replace the coax wire from the applicable emergency call module antenna to the data bus on board diagnostic interface, J533 (address word 0019).

- 9. Utilize the VAS 6720 to build a single coax wire from the emergency call module to the data bus on board diagnostic interface, J533 (address word 0019).
  - Do not split the new wire at the TIM connection between T2dkx and T2dk.
  - Route the new wire along with the existing harness.
  - Ensure that there are no sharp bends.
