TOL NOTICE (US&CA) – May 15, 2020 **TOL Ref. # 14764-SVC**

TIGER 900 FUEL GAUGE

The central warranty team has informed us of an error with the fuel gauge calibration on the Tiger 900 models. This issue could cause the fuel gauge to show more fuel and tank range than is actually available when the fuel level is low. In turn, this could cause a rider to run out of fuel with the gauge showing 1 bar of fuel and around 25 miles/35 km range still showing on the instruments.

We are urgently working on an updated calibration to resolve this issue and will release this on the Triumph Diagnostic Tool as soon as possible. We are currently targeting the first week of June to distribute the update.

In the interim please ensure that you inform customers of this during handover of any new Tiger 900's and also when giving any demonstration rides.

If you have any questions, please contact Triumph Customer Support at (888) 284-6288.
