	NUMBER PS621 (Rev 1, 06/26/2020)	DATE August 2019

TECHNICAL OPERATIONS

NIRO EV (DE EV) COOLANT COLORS

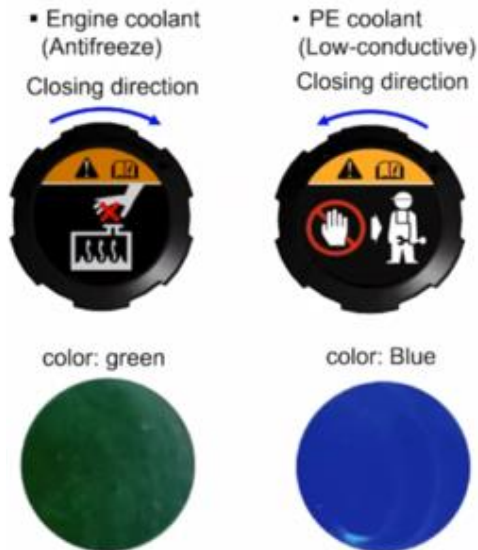

This Pitstop provides information regarding the two (2) types of coolant used in 2019MY Niro (DE EV) vehicles. One is the common coolant colored **GREEN** (also used for combustion engine models) and the other is the EV (low-conductivity) coolant colored **BLUE**. The 19MY Niro EV vehicle may be equipped with either one of these coolant color types and is normal for this vehicle application. The 20MY will have only the **BLUE** coolant.

DO NOT mix the two types of coolants together, or switch the coolant type originally used in the system of the applicable EV vehicle.

The **BLUE** EV Battery System Coolant is available through Kia Chemicals:

Coolant	P/N	Color
KIA LONG LIFE ANTIFREEZE/ COOLANT	UM040 CH012	GREEN
EV (ELECTRIC VEHICLE) BATTERY SYSTEM COOLANT	UM020 CH237	BLUE

Note that the EV coolant reservoir caps are threaded the opposite of the engine caps and turn **Clockwise** to loosen:

Follow the instructions provided in the applicable Shop manual on KGIS for more information
