Product Change Notice - Second vendor for hydraulic valves

Dear Valued Customer:

Please be advised, LCI has added a second vendor for hydraulic leveling valves to keep pressure on the primary vendor to sustain a competitive price, sustain/improve quality, and continue to innovate.

The current and second source valves are visibly different (Fig. 1) but they install the same way. The only difference in operation is the cartridge valve manual override screw size — the current source is 5/32" and second source is 5/64".

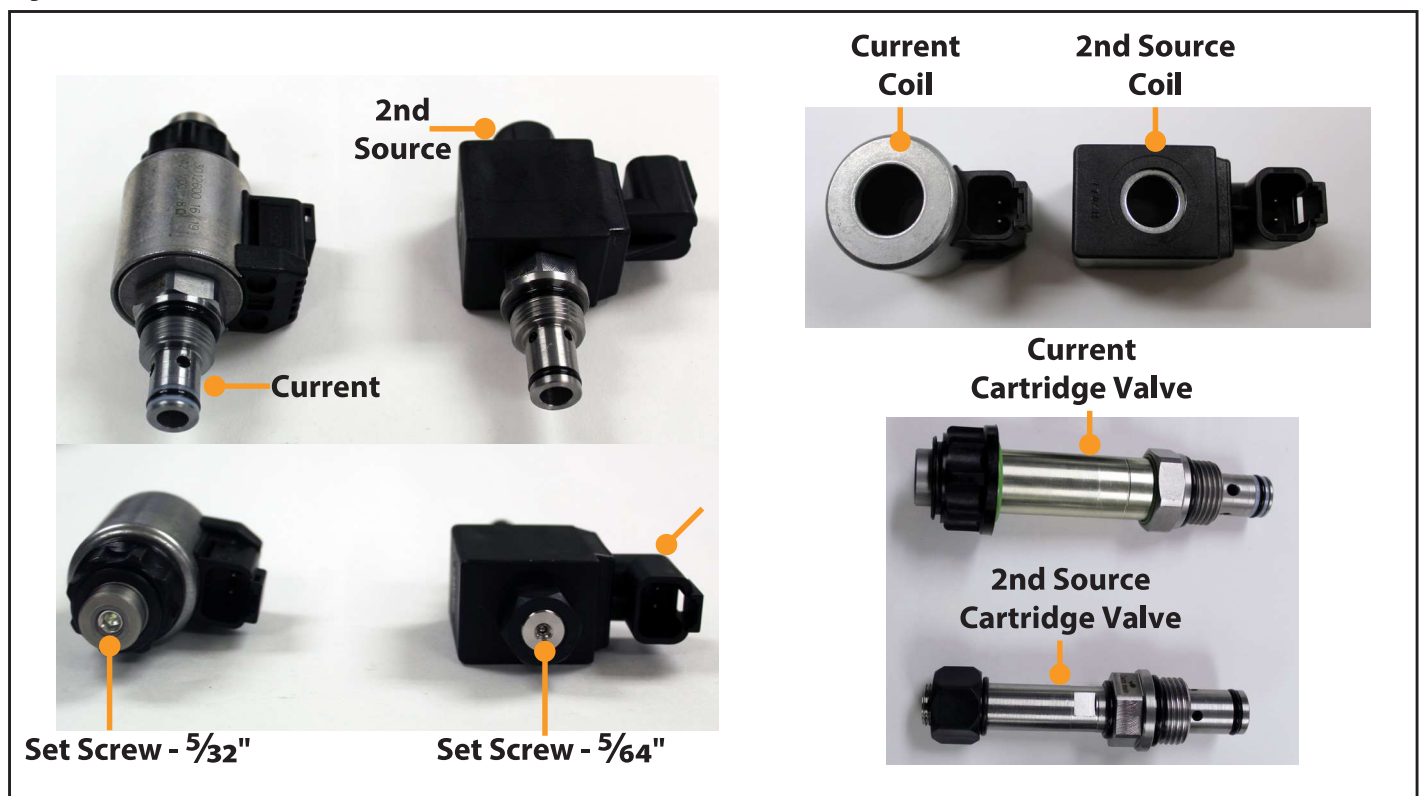

The OEM leveling kits will contain all current source or all second source components - the two sources will not be mixed in a kit. The cartridge valve and spade coils are shipped unassembled. The cartridge valve/coils are not interchangeable between the two sources for service/replacement (PN 176954 must be used with PN 177094, and PN 80119 with PN 80112.)

Vendor	Spade Coil PN	Cartridge Valve PN
Current Source	174184	177094
Second Source	801119	801112

The second source has passed the same testing as the current source. Test reports are available upon request.

There is no leveling kit part number change for the customer and no price change. The second source will be used as dictated by inventory starting on xxxx.

Fig.1

If you have any questions, please feel free to call me directly or your LCI representative. We value and appreciate your business and partnership.

Sincerely,

Mason Ogle

Director of Sales
