Sedans - Rear License Plate anti-vibration Pad

This Technical Information Bulletin is to provide clarification of a change in process relating to the installation of the anti-vibration pad for the rear licence plate on Sedan models only.

The PAD will no longer be installed by the factory. It must be installed during the Pre Delivery Inspection when attaching the rear license plate. This running change was necessary to avoid the pad from becoming detached during transportation.

A new kit has been created that now includes the pad along with the Wheel Rim Caps (shown below) and will be placed in the trunk with the other items to be installed during the PDI.

Please review this information with your staff and if you have any questions, contact your Regional Aftersales Manager (RAM) or Maserati Technical Support.

Thank you for your continued support and cooperation.
