July, 2020

Subject: **Inspection Procedure Revision - Testing the ACS System for Air Leaks**

No.

**2020-3**

## SERVICE INFORMATION

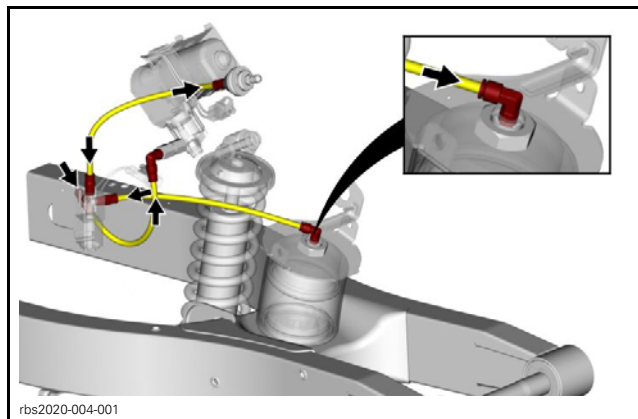

YEAR	MODEL
2020	RT Limited

If the vehicle has an air leak, the following symptoms will appear:

- Constant air leakage sound
- Air compressor running continuously.

BUDS2 will return one or more of the following codes:

- C210E - Suspension position sensor out of range / signal behavior abnormal
- C21E1 - Suspension air leak plausibility check
- C210A - Suspension system control time exceeded.

The most optimal timing to perform an inspection for an air leak of the rear suspension is during PDI before the installation of the rear cargo.

Consequence : This situation may lead to a premature wear or failure of the air compressor and other related components.

## PROCEDURE
