TECHNICAL OPERATIONS

SUBJECT: REAR OCCUPANT ALERT (ROA) W/ REAR DOOR LOGIC

This Pitstop provides information regarding the Rear Occupant Alert (ROA) with Rear Door Logic system on 2021MY K5 (DL3a) and Seltos (SP2) models. This system is designed to help prevent a rear passenger from being left inside the vehicle when exiting. When you open the front door after opening and closing the rear door and turning off the engine, the “Check Rear Seats” warning message appears on the cluster.

To deactivate or activate ROA:

- Vehicles equipped with standard audio: Press the ‘Mode’ button (insert icon) on the steering wheel until “User Settings” menu appears on the instrument cluster display. Select “Convenience” → “Rear Occupant Alert” → Select/deselect the check box.
- Vehicles equipped with the infotainment system: Select the ‘Setup’ button on the infotainment system -> Select “Vehicle” → “Convenience” → “Rear Occupant Alert”.

Refer to vehicle owner’s manual for detailed operating instructions.

WARNING

The Rear Occupant Alert (ROA) with Rear Door Logic system does not physically detect objects or people in the rear seat unlike the Telluride (ON) with ultrasonic sensor system. Always make sure you check the rear seat(s) before getting off the vehicle.
