

Index of Manufacturer (MFR) Communications

Manufacturer:	E-ONE
Date Range:	August 1, 2020 - August 31, 2020
Date Submitted:	09/01/2020

[The effect of the defect or noncompliance should be described below.]

No.	MFR Communication ID	MFR Communication Date	Make	Model	Model Year	
1	2020-1121	August 19,2020	E-ONE	C2	2010	<p>E-ONE would like to make sure customers are aware of the proper operating expectations when using their aerial master stream water ways. Prior to flowing water through the aerial water way, all drains in the system should be closed. On certain aerial models the master stream relief valve is pilot operated. This pilot operated valve has a drain in the pilot signal line to prevent freezing in winter months, while not in use. If the drain for the pilot signal is left open, full pilot signal may not reach the valve. If the valve does not receive full pilot signal, it may not open when pressure increases past its set-point. Please continue to open all drains as required by training, but be sure to close them prior to operating water system again. Enclosed please find an informational tag that should be installed on each aerial, on the attached list, in the vicinity of the relief valve drain as an operator reminder.</p>
