## **D20M8-A No updated CPCA software available** Sep 2, 2020 9:17 PM

I have a fleet of day cabs but the one I'm currently on MD3978 were trying to deliver 8 unit to customer doesn't offer me the required updated CPCA501T software R19.32.00.00A only offers R19.11.00.00A or V14.00.00. now the description for the v14 says " CPCA R19.32 bootloader.MY2020 " curious if anyone else has run into this yet if so what was done/ recommended, and yes a ticket was submitted to Detroit.

Is this a case where 20TS-04 applies?

The reference is for CPC5 going to R19.32 software

The reference to 20 TS-4 should be for GHG21 engines. This is still a GHG17 engine. I think you are on the right track and getting a hold of Detroit Diesel. Seems like there is something missing from the server.

I tried to find this bulletin yesterday and had no luck so I was under the impression it didn't work and Detroit removed it, I did go ahead with the TSB and worked perfectly.

Thanks Pat !

That's interesting since your engine is still a GHG17. I thought that TSB only applied to GHG21.
