**2013 cascadia no power when turning key** Sep 21, 2020 8:25 PM

I have a 2013 cascadia that has been sitting for 4 days In the yard. When I Finally got around to it turn the key and no power figured the batteries were probably dead so I hooked a battery charger. After a little while tried to restart unit still no power removed and replace batteries. Turn key still no start but the headlights and flashers come on. Checked all fuses and relays good from what I can see. Battery disconnect switch is on. All batterie are connected right. The unit drove to the shop. Any ideas or had this happen to y'all?

VIN?

Have you tried hooking up DiagnosticLink? Verified the PT-PDM is getting power? Sounds like you are at least getting power to the SAM Chassis

sounds like the PNDB on the firewall has gotten stuck.

one way to verify is to turn the disconnect switch on, turn the key on, take a long handled screwdriver and tap the box on the PNDB and see if the truck turns on or not.

usually he flashing lights means the PNDB is switched off. (disconnect switch turned off)

so if you have the switch on your problem most likely lies within the PNDB
