has anyone experienced dim brake lights on 2020 western star Sep 17, 2020 11:07 PM
new unit lx3516 when you pull hand brake on to check brake light on your walk around they are dim like marker light then after couple minutes they will brighten up and stay bright for next ten mins or applications, if you don't use brakes for 5 mins they go back to dim again until you hold them on, for 30 secs or so, any ideas,.

lx3516 2020 star , 2536 km

What troubleshooting has been done? I would suspect it may be a failing circuit breaker.

Grant we have experienced this problem multiple time and in every 1 we found it was a failing brake light circuit breaker like [Sean Evans](#) said. Also we are finding on the non freightliner vehicles we sell that the relays that are made by CIT also fail the same way.
