

WLJ6 Stop Delivery – Tightening the screw connection of the rear spoiler blade

Version 2

WLJ6 Stop Delivery – Tightening the screw connection of the rear spoiler blade

Vehicle blocking

Vehicles must not be delivered to customers until the required remedial measure has been carried out. Therefore, please carry out following Stop Delivery, immediately.

Overview

On the affected vehicles, there is a possibility that the screw connection between the rear spoiler blade and the drive unit of the rear spoiler was not tightened to the specified torque.

As a result, the threaded joint may become loose over the service life of the vehicle.

The screw connection of the rear spoiler blade must be tightened to the specified torque before delivery to the customer.

Model type	Taycan (Y1A)
Model year	2020
Number of affected vehicles	50

Vehicle usage

The vehicles may only be driven for loading and unloading purposes in the transport chain.

Further use is not permitted. Test drives are to be omitted.

Test instructions and remedial measures

See appendix.

Should vehicles have already been delivered to customers in the meantime contrary to expectations, please report them to ryan.cooney@porsche.us. Please include backup documentation for the sale and delivery prior to this release. The further procedure for these vehicles will be communicated at a later point of time.

Subsequent procedure

Please inform all relevant dealer staff of this notification, i.e. Management and Sales, to ensure vehicles are remedied prior to delivery.

The campaign is also assigned to the affected vehicles in PCSS.
