TECHNICAL SERVICE BULLETIN				
SERVICE REMINDER SETTING RESET PROCEDURE				

This bulletin provides the procedure to turn OFF the service reminder lamp, at the first service interval reminder alert that will display on the instrument cluster. The KDS is required to change the setting from 'Workshop' to 'Customer Mode'. During the KVID PDI, the first service interval is set at 6,000 miles for Turbo engines and 7,500 miles for Non-Turbo engines. This function can also be used if the customer decides they would like to set the service interval at Severe vs Normal schedule that was set during the PDI. Dealers and customers should always set the service interval as a reminder when the oil service and/or other maintenance are performed. Follow the procedure listed in this TSB to properly set the cluster to customer mode.
