

Dealer:

CUSTOMER STATES THAT THE REAR CONTROL SCREEN BLANK BUT THE FRONT ONE WORKS. REMOVE FRONT DISPLAY SCREEN AND REAR AND SWITCH. NOW THE REAR SCREEN THAT HAD TO DISPLAY WILL WORK IN FRONT AND

Pleasure-Way:

You need to test the wiring first for continuity:

Unplug wire from G6 board and unplug the other end of wire from the rear 7 inch screen. Then test the whole length of the wire ---- test each wires-----the 4 wires (red, white, black & green) for continuity. Let us know.

Dealer:

called pleasure-way, they want wires cut at g6a connector and at rear monitor and shortened and reconnected and tested. cut off about 1.5 inch and reinstall wires in original plugs and test. now rear monitor works. take photos of wire, shortened harness and rear screen.
